

## MERRIMACK COUNTY CONSERVATION DISTRICT

---

The Concord Center, Suite 211  
10 Ferry Street  
Concord, New Hampshire 03301-5081

### SOIL POTENTIAL INDEX FOR CURRENT USE ASSESSMENT

The Soil Potential Index (SPI) is a number ranging from 0 to 100 and reflects the potential capability of agricultural land to produce crops. The soil types from which SPI numbers are derived are furnished to the Merrimack County Conservation District via the Soil Survey of Merrimack County.

All field boundaries must be current and accurately furnished by the landowner, as well as appropriate tax maps, property surveys, sketches, etc. SPIs apply to current use agricultural land only (pasture, hay, row crops, Christmas trees, orchards, horticulture). SPIs are individually calculated per contiguous unit.

Please contact the District office at 223-6023 with any questions.
